3. Go to "Start" to enable "Start Recording Schedule" then you will see there is green light in the top right corner of screen. The green light means it enables the motion detection but it is not recording.

4. You will see the red light when the motion is triggered. It will turn green light after the motion detection region is clear.

5. When you go to playback, you will see a green bar which is recorded when the motion is triggered.
