If you want to use AppleTalk and your printer is a PostScript printer If you want to use LPR or your printer isn't a PostScript printer

## **AppleTalk**

1.Mac OS X 10.2.x/10.3.x

Select "AppleTalk" and "Local AppleTalk Zone". The computer will find the print servers in the local area network. You can select the suitable printer model for your printer, or select "Generic". Don't select "Auto Select"! Press "Add".

## Mac OS X 10.4.x

Click "Default Browser". The computer will find the print servers in the local area network. Select "AppleTalk". You can select the suitable printer model for your printer, or select "Generic PostScript Printer". Don't select "Auto Select"! Press "Add".

Bonjour, in Mac OS 10.2.x/10.3.x, is named Rendezvous. It is not a new protocol. It is just a solution while there isn't any DHCP servers in your local area network and you don't know how to configure the fixed IP addresses to the print servers and the computers.

Bonjour supports three protocols. LPR, IPP, and RawTCP. If you choose Bonjour, it will automatically chooses one of the three protocols to print. And, you can use the non-PostScript printer driver.

If your print server don't support Bonjour, don't choose this.
