How to use iCamSecure on your iPhone ?

LevelOne now offers free Application on Apple's App store for you to view the video on IP Cam Secure while on the road.
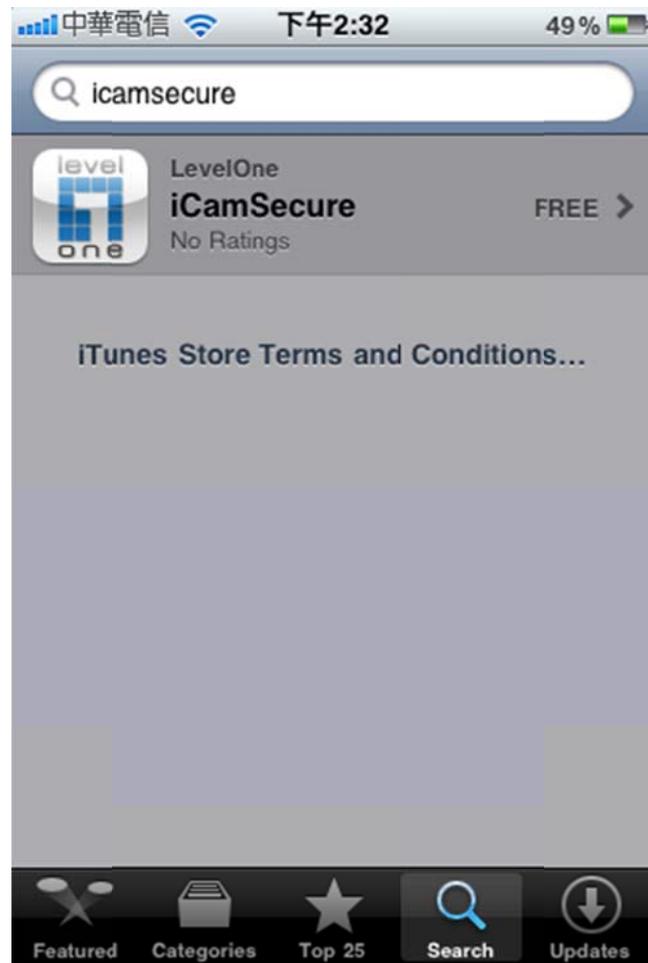

Prerequisite:

You will need to first know how to install the IP Cam Secure software and Remote Live view server.

You may refer to the tutorial in the link below.

http://download.level1.com/level1/faq/How%20to%20install%20IP%20Cam%20Secure%20Remote%20Live%20Viewer.pdf

◆ Please note the IP address, user name and password are subject to change according to your own configuration. The tutorial is only made for your reference.

◆ iCamSecure software is only designed to work with IP Cam Secure, it is not compatible with LevelOne's NVR series.

◆ It's recommended to use 3G or WIFI connection when viewing streaming video.

1. Login to App store from your iPhone and search for iCamSecure.

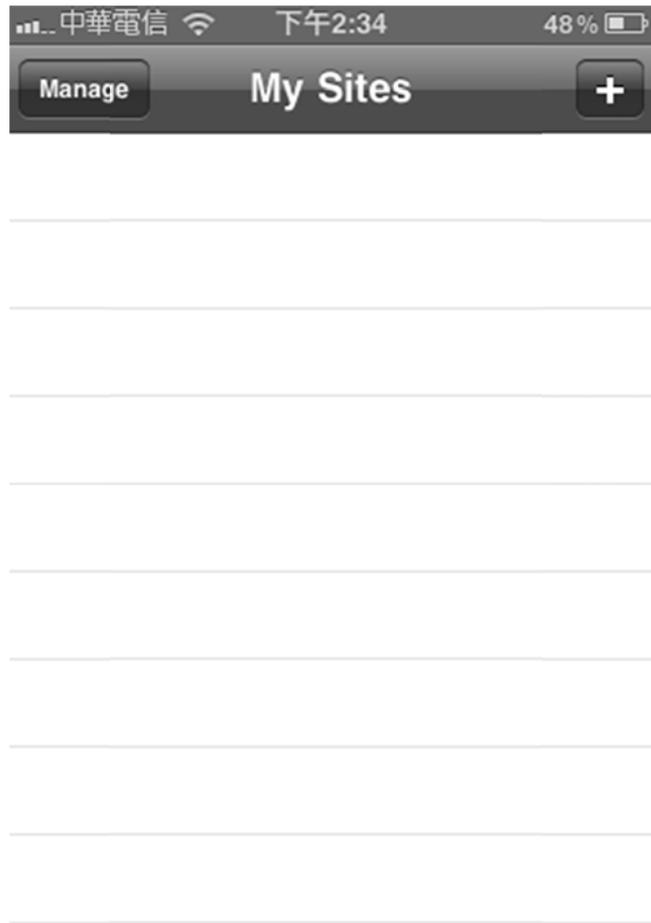

2. Tap on "FREE".

3. Tap on "INSTALL"

◆ You might be prompted for App store user name and password.

4.　iCamSecure is installing.

5. Once installed, tap on the icon to start iCamSecure.
6. Tap on the "+" sign to build a new connection.

7. You can name your connection.
8. Please input the IP Cam Secure's Public IP address.

9. Please input the server port, by default is 5150
10. Please input the user name of IP Cam Secure, by default is admin.

11. Please input the password of IP Cam Secure.

12. Once completed, please tap on "Save".
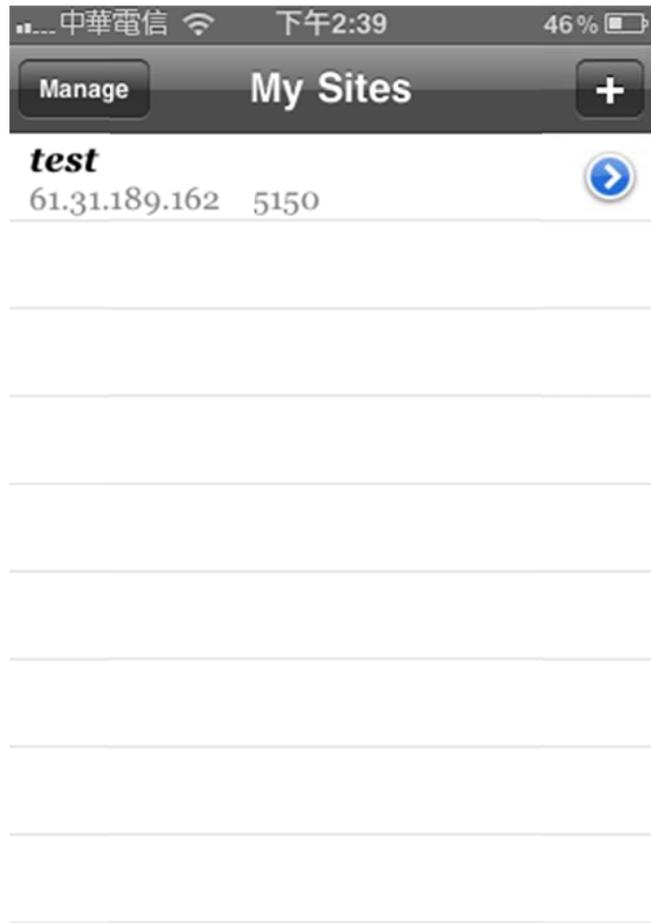

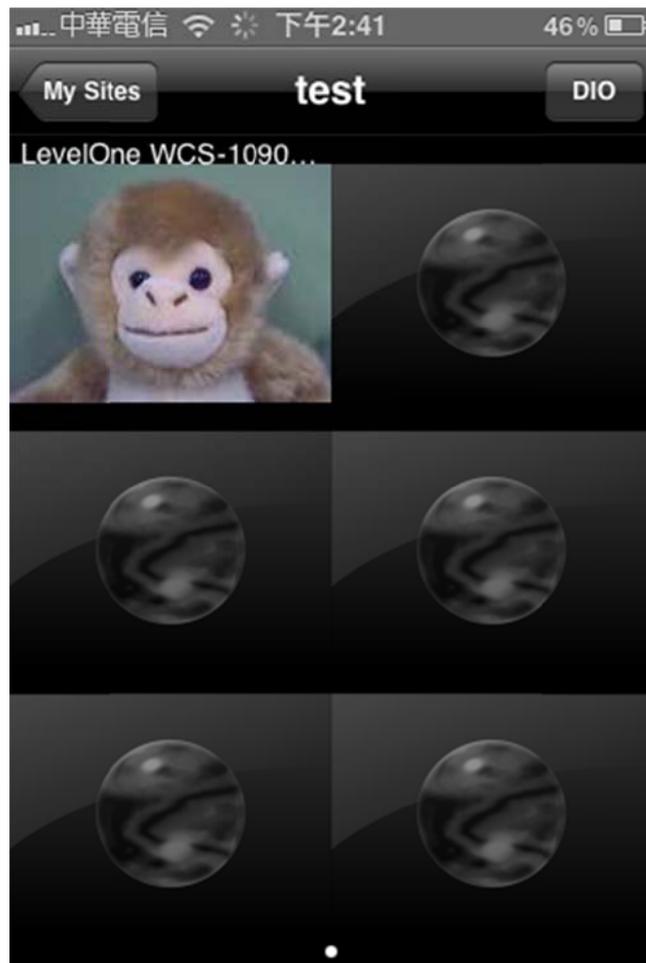

13. Tap on the Server name, in this case "Test".

14. iCamSecure will take you to IP Cam Secure and you should be able to view the streaming video installed on it.

◆ IP Cam Secure Lite only supports one channel, whereas professional version supports multiple channels.
